

E-AFRICA REMOTE JOB STARTER PACK™

Developer Brief

Everything you need to build before launch

Overview

This document is your build guide. It tells you every page you need to create, how Paystack should be connected, and how to install the Meta Pixel. Follow the steps in order and everything will be ready for the ad launch.

Important: The buyer must never leave the website to complete payment. If they go to Paystack's own payment page, the Meta Pixel cannot track the purchase and the ad data will be useless. The checkout must happen on the website using Paystack's inline popup. This is covered in detail in Section 2.

The ad test cannot go live until all three things are done: the website pages are built, Paystack inline checkout is connected and tested, and the Meta Pixel is installed and verified.

Section 1 — Pages to Build

You need four pages. Here is what each one is for and what it must contain.

Page 1 — Sales / Landing Page

This is the main page. When someone clicks the ad, this is where they land. It needs to make the product clear and give them a way to buy.

What must be on this page:

- A headline at the top — the main hook for the product
- A short description of what the buyer gets
- A section that shows all three pricing tiers side by side — Foundation (₦15,000), Professional (₦20,000 launch / ₦35,000 regular), Executive (₦50,000)
- Each pricing tier must have its own Buy Now button
- The Professional tier should be visually highlighted as the recommended option — different background colour or a badge that says Recommended or Founding Member Offer
- A note under the Professional price that shows the founding slot count — example: 20 slots only, 14 remaining
- A short list of what is included in each tier
- An email input field — the buyer must enter their email before clicking Buy Now. Paystack needs it to send them a receipt, and it keeps them on the site for the inline checkout

- A disclaimer at the bottom — something like: This product does not guarantee employment. Results depend on your experience, effort, and the job market

The Buy Now buttons on this page trigger the Paystack payment popup directly — the buyer never leaves this page. The email input field must come before the buttons. Details on how to set this up are in Section 2.

Page 2 — Checkout Page

This page is what appears after the buyer clicks Buy Now. It is a simple page that collects the buyer's email address and confirms what they are about to pay for, before triggering the Paystack payment popup.

Why this page is needed:

- The Meta Pixel tracks activity only on your website. If the buyer goes to Paystack's own hosted page to pay, the Pixel cannot see it and the purchase is not tracked
- By keeping the buyer on your site and using Paystack's inline popup, the entire payment happens on your domain and the Pixel works correctly
- This page also gives the buyer a moment to confirm what they are buying before payment, which reduces disputes and confusion

What must be on this page:

- The name of the product and tier they selected — e.g., Professional Pack — Founding Member
- The amount they will pay — e.g., ₦20,000
- An email input field (if not already collected on the sales page)
- A Confirm and Pay button — this triggers the Paystack inline popup
- A short line that says: You will not leave this page. Payment is processed securely via Paystack

Do not redirect the buyer to paystack.com or any external Paystack URL. The payment must open as a popup on your own page. If the buyer is taken off-site at any point before reaching the Thank You page, the Pixel tracking breaks.

Page 3 — Thank You / Confirmation Page

This is the page the buyer sees after payment goes through successfully. It is also where the Meta Pixel fires its Purchase event, which is critical for ad tracking to work.

What must be on this page:

- A confirmation message — something like: Payment received. Thank you for your purchase
- The name of what they bought — e.g., Professional Pack — Founding Member
- Instructions on what happens next — e.g., You will receive your download link by email within a few minutes. If you do not see it, check your spam folder
- A contact email in case they have questions

This page must have its own unique URL — for example: yourwebsite.com/thank-you — because the Meta Pixel tracks the Purchase event by detecting when someone reaches this specific page. If it shares a URL with any other page, the tracking will not work.

Page 4 — Failed Payment Page

If a payment fails or the buyer closes the Paystack popup without paying, they should land on this page instead of a blank screen.

What must be on this page:

- A short message — something like: Your payment was not completed. No charge has been made
- A button to try again — link it back to the Sales Page or the Checkout Page
- A contact email in case they need help

Section 2 — Connecting Paystack (Inline Checkout)

Paystack inline checkout opens a payment popup directly on your website. The buyer never leaves the page. This is the only method that allows the Meta Pixel to track purchases correctly.

The live keys have already been provided. Here is exactly how to set everything up.

Step 1 — Locate Your Live Keys

Your Paystack account has two keys. You will need both.

1. Log in to dashboard.paystack.com
2. Click Settings in the left menu
3. Click API Keys and Webhooks
4. Copy the Live Public Key — it starts with `pk_live_` — this goes in the website code
5. Copy the Live Secret Key — it starts with `sk_live_` — this goes on the server only, never in HTML or JavaScript that is visible to the public

Step 2 — Add the Paystack Script to Your Pages

Add this single line inside the head section of the Sales Page and the Checkout Page. This loads the Paystack popup library.

```
<script src="https://js.paystack.co/v1/inline.js"></script>
```

Step 3 — Add the Payment Function

Add this JavaScript to the Checkout Page. It runs when the buyer clicks Confirm and Pay. Replace `pk_live_YOUR_PUBLIC_KEY_HERE` with your actual live public key.

```
function payWithPaystack(amount, planName, customerEmail) {  
  var handler = PaystackPop.setup({  
    key: 'pk_live_YOUR_PUBLIC_KEY_HERE',
```

```

email: customerEmail,
amount: amount * 100, // Paystack uses kobo – multiply naira by 100
currency: 'NGN',
ref: '' + Math.floor(Math.random() * 1000000000) + 1),
metadata: {
  custom_fields: [{ display_name: 'Plan', value: planName }]
},
callback: function(response) {
  // Payment successful – send buyer to Thank You page
  window.location.href = 'https://yourwebsite.com/thank-you';
},
onClose: function() {
  // Buyer closed the popup – send to Failed Payment page
  window.location.href = 'https://yourwebsite.com/payment-failed';
}
});
handler.openIframe();
}

```

Step 4 — Connect the Buttons

Connect each Buy Now button to the function above. The button reads the email the buyer entered and passes the correct amount and plan name.

```

<!-- Foundation Buy Now button -->
<button onclick="payWithPaystack(15000, 'Foundation Pack',
  document.getElementById('customer-email').value)">
  Buy Now – ₦15,000
</button>

```

```

<!-- Professional Buy Now button -->
<button onclick="payWithPaystack(20000, 'Professional Pack – Founding Member',
  document.getElementById('customer-email').value)">
  Buy Now – ₦20,000
</button>

```

```

<!-- Executive Buy Now button -->
<button onclick="payWithPaystack(50000, 'Executive Pack',
  document.getElementById('customer-email').value)">
  Buy Now – ₦50,000
</button>

```

The email input field on the page must have the id customer-email exactly as shown:

```

<input type="email" id="customer-email" placeholder="Enter your email address" required />

```

If the email field is missing or has a different id, the payment function will not work. Make the field required so the buyer cannot skip it.

Step 5 — Set the Redirect After Payment

In the payment function above, the callback line handles what happens after a successful payment:

```
window.location.href = 'https://yourwebsite.com/thank-you';
```

Replace `https://yourwebsite.com/thank-you` with the actual full URL of your Thank You page. This is the page where the Meta Pixel Purchase event fires. If this URL is wrong, the Pixel will not track the sale.

Step 6 — Test Before Going Live

Before the ads launch, run a test purchase for each tier. Paystack has a test mode that uses fake card details so no real money is charged.

6. In the Paystack dashboard, switch from Live to Test mode
7. Use this test card: Card number 4084 0840 8408 4081, any future expiry date, CVV 408, PIN 0000
8. Go to your Checkout Page and complete a purchase for each tier
9. Confirm the Paystack popup opens on your page — the buyer should not leave the site
10. Confirm you land on the Thank You page after payment goes through
11. Confirm the Failed Payment page loads if you close the popup before paying
12. Switch back to Live mode in the Paystack dashboard before launching the ads

If the Paystack popup opens on your page, payment goes through, and you land on the Thank You page — the checkout is set up correctly and the Pixel will track purchases.

Section 3 — Installing the Meta Pixel

The Meta Pixel is a small piece of code that tells Facebook when someone visits your website or completes a purchase. It is what allows the ad campaign to track results and improve over time.

There are two parts to the installation. Both are required.

Part A — Base Code (goes on every page)

Copy this code exactly and paste it inside the head section of every page on the website. If there is already code between the head tags, paste this underneath it but still above the closing `</head>` tag.

```
<!-- Meta Pixel Base Code -->
<script>
!function(f,b,e,v,n,t,s)
{if(f.fbq)return;n=f.fbq=function(){n.callMethod?
n.callMethod.apply(n,arguments):n.queue.push(arguments)};
if(!f._fbq)f._fbq=n;n.push=n;n.loaded=!0;n.version='2.0';
n.queue=[];t=b.createElement(e);t.async=!0;
t.src=v;s=b.getElementsByTagName(e)[0];
s.parentNode.insertBefore(t,s)}(window, document, 'script',
'https://connect.facebook.net/en_US/fbevents.js');
fbq('init', '1367317238456680');
fbq('track', 'PageView');
</script>
<noscript></noscript>
```

```
<!-- End Meta Pixel Base Code -->
```

This base code must be on every page — sales page, checkout page, thank you page, and failed payment page. If it is missing from any page, Facebook cannot track visitors on that page.

Part B — Purchase Event Code (Thank You page only)

This second piece of code goes on the Thank You page only. It tells Facebook that a purchase was completed. Paste it immediately after the base code, still inside the head section of the Thank You page.

```
<!-- Purchase Event - Thank You page only -->
<script>
  fbq('track', 'Purchase', {
    value: 20000,
    currency: 'NGN'
  });
</script>
<!-- End Purchase Event -->
```

The value of 20000 is the default for the test period. This is fine — it represents the main Professional tier we are promoting. It can be made dynamic per tier later if needed.

Part C — Verify the Pixel is Working

After installing both pieces of code, verify everything is working before launching the ads. A broken Pixel means the entire ad test produces no useful data.

13. Install the Meta Pixel Helper extension in Chrome — search Meta Pixel Helper in the Chrome Web Store and add it
14. Open the Sales Page in Chrome
15. Click the Meta Pixel Helper icon in the top right corner of Chrome
16. It should show a green dot and say Pixel found with PageView firing
17. Open the Checkout Page — same check, green dot and PageView
18. Now open the Thank You page
19. Pixel Helper should show green with both PageView and Purchase firing
20. If you see a red dot or an error, the code is not placed correctly — check it is inside the head tags and the Pixel ID 1367317238456680 matches exactly

Green dot with PageView on every page, and both PageView and Purchase on the Thank You page — everything is working and the ads can launch.

Section 4 — Pre-Launch Checklist

Go through every item before confirming the site is ready. All items must be done before the ads go live.

Pages

- Sales page is live with headline, product description, and three pricing tiers
- Each pricing tier has its own Buy Now button
- Professional tier is visually highlighted as Recommended or Founding Member Offer
- Founding slot count is visible on the Professional tier
- Email input field is on the Sales Page or Checkout Page and marked as required
- Disclaimer is visible at the bottom of the Sales Page
- Checkout Page is live — shows the selected tier, amount, and Confirm and Pay button
- Thank You Page is live at its own unique URL
- Thank You Page shows confirmation message and next-step instructions
- Failed Payment Page is live with a Try Again button linking back to the Sales Page

Paystack

- Paystack inline script added to Sales Page and Checkout Page head section
- Live public key is in the payWithPaystack function — starts with pk_live_
- Live secret key is stored securely on the server only — not in any frontend code
- Each Buy Now button passes the correct amount and plan name to the function
- callback redirect points to the correct Thank You Page URL
- onClose redirect points to the Failed Payment Page URL
- Test purchase completed for all three tiers — popup opened on-site, Thank You Page loaded
- Paystack switched back to Live mode after testing

Meta Pixel

- Base code is in the head section of every page
- Purchase event code is in the head section of the Thank You Page only
- Meta Pixel Helper shows green on the Sales Page — PageView firing
- Meta Pixel Helper shows green on the Checkout Page — PageView firing
- Meta Pixel Helper shows green on the Thank You Page — PageView and Purchase both firing
